[LinkedIn](#) | [GitHub](#) | [LeetCode](#)

Professional Summary

Full-Stack Software Engineer specializing in Next.js (App Router, Server Actions, SSR) and React, with deep expertise in building scalable full-stack applications, Agentic AI architectures, and Retrieval-Augmented Generation (RAG) pipelines. Proficient in designing secure, high-performance backends using Node.js, Express, and RESTful APIs, coupled with database optimization using PostgreSQL, MongoDB, and Prisma ORM. Strong capabilities in cloud deployments (AWS EC2, Docker, Vercel) and complex state management.

Education

Bhagwan Parshuram Institute of Technology, Delhi | *B.Tech in Computer Science Engineering*

2023 – 2027

- **CGPA:** 8.29

Technical Skills

Languages: C++, Python, JavaScript (ES6+), HTML5, CSS3

AI & Frameworks: Agentic AI (LangGraph, LangChain), RAG, Gemini API, Firecrawl API

Frontend Engineering: React 19, Next.js (App Router), Tailwind CSS v4, Framer Motion, Responsive Design

Backend & APIs: Node.js, Express.js, RESTful APIs, JWT Authentication, Clerk Auth

Databases & Caching: MongoDB Atlas, PostgreSQL, Prisma ORM, Redis (Upstash)

DevOps & Cloud: Docker, AWS EC2, Git, GitHub, Linux, Supabase, Postman, Vercel

Core CS: Data Structures & Algorithms (400+ problems solved), OOP, DBMS, Operating Systems, Computer Networks

Projects

RepoInsight – Intelligent Codebase RAG Platform

[GitHub](#) | [Live Demo](#)

Tech Stack: React 19, Vite, Tailwind CSS v4, Node.js, Express, MongoDB Atlas, LangGraph, LangChain, JWT, Docker, AWS EC2

- Developed a full-stack Retrieval-Augmented Generation (RAG) platform that clones, parses, chunks, and indexes public GitHub repositories into a vector database for semantic codebase analysis.
- Engineered a stateful multi-agent system using LangGraph and LangChain to orchestrate precise code search, dependency mapping, and natural language code exploration.
- Built secure authentication using JWT and persistent chat histories stored in MongoDB Atlas, facilitating seamless multi-session developer interactions.
- Packaged the application using a multi-stage Docker build and deployed it to AWS EC2, ensuring lightweight, high-availability production access.

PrepWise – AI Career Coach

[GitHub](#) | [Live Demo](#)

Tech Stack: Next.js, Gemini AI, Prisma ORM, PostgreSQL, Clerk Auth, Tailwind CSS, Shadcn UI, Vercel

- Built an AI-powered career tech platform equipped with an ATS-friendly resume builder, cover letter generator, and interactive mock interview simulator.
- Integrated Gemini AI to analyze user interview transcripts, dynamically returning actionable evaluations on technical performance and delivery metrics.
- Implemented multi-tenant relational schemas using PostgreSQL and Prisma ORM, securing onboarding flows via Clerk Authentication.
- Constructed interactive dashboards using Next.js Server Components to track user performance logs and display salary trend insights.

DropAlert – Price Tracker

[GitHub](#) | [Live Demo](#)

Tech Stack: Next.js, Supabase, Firecrawl API, Redis (Upstash), Resend, Recharts, Framer Motion, Tailwind CSS v4, Vercel

- Developed a price-tracking platform utilizing Firecrawl API to extract structured e-commerce data (pricing, name, image) bypassing bot blocks.
- Setup automated price check polling via cron jobs to periodically check price updates against users' targeted values.
- Configured transactional email dispatches using Resend to automatically notify users via structured HTML mail templates when target thresholds are hit.
- Visualized historical price fluctuations on responsive area charts using Recharts, integrated with Supabase database for backend state management.

Achievements

- Solved **400+** **Data Structures and Algorithms** problems across coding platforms.
- **GTBIT Hackathon:** Secured **3rd Place** among 80+ competing teams.
- **HackMait Hackathon:** Finished among the **Top 17** teams out of 700+ participants.

Training & Certifications

- **Web Development Training** – Winnovation
- **Data Structures and Algorithms Certification** – Apna College
